

5. ACKNOWLEDGEMENTS

A number of people have contributed in various ways to this report and it is important that their effort be recognised.

Ann Dennis and Sue McNair from the Alexandra Regional Office assisted in identifying and verifying the range of land units and the associated soil-vegetation details.

Grant Boyle and June Bowman measured the saturated hydraulic conductivity for all representative sites. Emma Bryant assisted with the detailed soil profile descriptions and organised the laboratory analyses of samples. Other staff members then at Keith Turnbull Research Institute - David Rees, Penny Fischer, Heather Anderson, Robyn Hodgson, Les Russell, Keith Reynard, Mike Austin - and at the Centre for Land Protection Research - Phil Dyson, Evan Jones - have all assisted at some stage and their contribution is greatly appreciated.

Rob Chaffe at the Alexandra Regional Office has supported this project from the outset. He has always been a strong advocate for detailed land resource information to underpin land-use planning decisions. Through his efforts alone the resources were found to ensure the field data was collated into a useful report.

Finally a special thanks to June Bowman for her patience and professional approach to collating and typing the initial and final drafts of this report.
