A LAND CAPABILITY STUDY of the SHIRE of ROMSEY
Map 1b: Map Units

This map provides the basis for land capability assessment. A Map Unit is an area of land that is identified by the geology of the parent material, slope and soil type, and is distinct from adjacent Map Units. Within a Map Unit the land use capability and response to management is considered to be uniform.

NATIONAL LANDCARE PROGRAM

KEY TO MAP UNITS

Qa1	Quaternary alluvium, terrace
Qf	Quaternary fan, gentle slope
Qba	Quaternary basalt, steep crest
Qbb	Quaternary basalt, steep slope
Qbc	Quaternary basalt, moderately steep slope
Qbd	Quaternary basalt, moderate slope
Qbe	Quaternary basalt, gentle crest
Qbf	Quaternary basalt, gentle slope
Qbg	Quaternary basalt, very gentle slope
Qbh	Quaternary basalt, drainage depression
Qbr	Quaternary basalt, gentle slope, rocky
Qva	Quaternary volcanic, steep crest
Qvb	Quaternary volcanic, steep slope
Qvc	Quaternary volcanic, moderately steep slope
Qvd	Quaternary volcanic, moderate slope
Qve	Quaternary volcanic, gentle crest
Qvf	Quaternary volcanic, gentle slope
Qvg	Quaternary volcanic, very gentle slope
Qvh	Quaternary volcanic, drainage depression
Dg1a	Devonian granitic, red, steep crest
Dg1b	Devonian granitic, red, steep slope
Dg1c	Devonian granitic, red, moderately steep slope
Dg1d	Devonian granitic, red, moderate slope
Dg1h	Devonian granitic, red, drainage depression
Dg2a	Devonian granitic, yellow, steep crest
Dg2b	Devonian granitic, yellow, steep slope
Dg2c	Devonian granitic, yellow, moderately steep slope
Dg2d	Devonian granitic, yellow, moderate slope
Dg2f	Devonian granitic, yellow, gentle slope
Dg2h	Devonian granitic, yellow, drainage depression
Dg2k	Devonian granitic, yellow, plateau
Dra	Devonian rhyodacite, steep crest
Drb	Devonian rhyodacite, steep slope
Drc	Devonian rhyodacite, moderately steep slope
Drd	Devonian rhyodacite, moderate slope
Drh	Devonian rhyodacite, drainage depression
Dsa	Devonian sediments, steep crest
Dsb	Devonian sediments, steep slope
Dsc	Devonian sediments, moderately steep slope
Dsd	Devonian sediments, moderate slope
Dsf	Devonian sediments, gentle slope
Ssa	Silurian sediments, steep crest
Ssb	Silurian sediments, steep slope
Ssc	Silurian sediments, moderately steep slope
Ssd	Silurian sediments, moderate slope
Ssf	Silurian sediments, gentle slope
Ssg	Silurian sediments, very gentle slope
Ssh	Silurian sediments, drainage depression
MW1	Mount William 1
MW2	Mount William 2
MW3	Mount William 3

This map comprises sections of the following maps of the 1:25 000 series of the Department of Finance, Survey and Mapping, Victoria:

Caldie North	7823-1-3
Clonbinane	7823-1-4
Wallan	7823-3-2
Balinadgale	7823-3-3
Springfield	7823-3-4
Romsey	7823-3-1
Riddells Creek	7823-3-2
Hendon	7823-3-3
Taylor Hill	7823-3-4
Clonnybrook	7823-1-1
Konagaderra	7823-1-4

Mapping units have been compiled and mapped by N. Baxter. Map units and associated symbols have been entered into the ArcInfo Geographic Information System (GIS) by Keith Reinard, Department of Conservation and Natural Resources. The final map was produced by Natural Resource Systems Branch.

NOTES FOR THE MAP USER

This map forms part of the report
"A Land Capability Study
of the
Shire of Romsey"
by N. Baxter, et. al, 1994

Every effort has been made to ensure the accuracy of map unit boundaries however the inherent variability of the landscape and the limitations of a 1:25 000 map scale has necessitated some generalization and will require the user to exercise caution when interpreting map information. Site specific visits may be required for detailed planning. Enlargement of the map will not improve accuracy and is discouraged.

Further information can be obtained from the Department of Conservation and Natural Resources, Centre for Land Protection Research, Bendigo.
