## SECTION 2 - GENERAL INFORMATION ABOUT THE AREA

### 2.1 Area and Location

The area of 17,110 hectares surveyed and described in this report covers 227 allotments in parts of the parishes of Kalkee, Wail, Dimboola and Kewell West, in County Borung, Wimmera Region. It is bordered on the North-west by 12 kilometres ( 7.5 miles) of the Kalkee Road and on the west by 10 kilometres ( 6.0 miles) of the Western Highway. The location and boundary of the surveyed area is shown in Figure 1.

### 2.2 Climate

### 2.2.1 Rainfall

Rainfall data available from Dimboola, Warracknabeal and Horsham are representative of the survey area and indicate the variation within the area.

Generally rainfall distribution over the area in summer is more variable than during the other seasons. Average total rainfall figures for the area, over the summer, autumn, winter and spring periods, are 62, 75,125 , and 113 mm , respectively. Average distribution of rainfall throughout the year is shown by the graph (Figure 2). Total annual rainfall for Dimboola is 400 mm , for Warracknabeal 378 mm and for Horsham 439mm.

Figure 2 - Distribution of the annual (30 years' average) rainfall for Dimboola, Warracknabeal and Horsham

In addition to average monthly rainfall, the percentage chances of receiving specified amounts or more for each moth, the percentage chances of receiving rainfall equal to or greater than the effective amount* for each month and the monthly figures for maximum rainfall in 24 hours are given in Table 1.

Table 1 - Average monthly rainfall, effective rainfall* and rainfall intensity at selected stations within or adjacent to survey area
(a) Dimboola

| Month | Average Rainfall (30 years)$\mathbf{m m}$ | Percentage changes of receiving : |  |  |  |  |  |  | Maximum rainfall in 24 hours (80 years)$\mathrm{mm}$ |

*Effective rainfall is defined as the amount of rain necessary to start germination and to maintain growth above the wilting point. It has been related to evaporation and this relationship has been used in calculating theoretical values of the effective rainfall at selected stations in the region.
+Anon. (1961) - Resources Survey, Wimmera Region. Central Planning Authority, government of Victoria.

### 2.2.2 Temperature and Evaporation

Temperature and evaporation data are available for Horsham only. At Horsham, February is the hottest month with an average daily mean temperature of 21.7 deg C .

The average annual evaporation figure at Horsham is 1205 millimetres which exceeds the average annual rainfall by 776 millimetrics; June, July and august are the only months in which rainfall is higher than evaporation.

Average maximum, minimum and daily mean temperatures, and monthly totals for tank evaporation at Horsham over a 37 year period are given in Table 2.

Table 2-Temperature and evaporation data for Horsham

| Month | Average daily temperatures ( ${ }^{\circ} \mathrm{C}$ ) |  |  | Tank evaporation (mm/month) |
| :---: | :---: | :---: | :---: | :---: |
|  | Maximum | Minimum | Mean |  |
| January | 29.5 | 12.9 | 21.2 | 207.5 |
| February | 30.2 | 13.3 | 21.7 | 172.5 |
| March | 26.8 | 11,1 | 18.9 | 132.5 |
| April | 21.5 | 8.3 | 14.9 | 80.0 |
| May | 17.2 | 6.1 | 11.7 | 50.0 |
| June | 13.7 | 4.6 | 9.1 | 35.0 |
| July | 13.3 | 3.8 | 8.6 | 35.0 |
| August | 15.0 | 4.4 | 9.7 | 40.0 |
| September | 17.8 | 5.5 | 11.7 | 67.5 |
| October | 21.2 | 7.3 | 14.2 | 87.5 |
| November | 25.1 | 9.8 | 17.4 | 125.0 |
| December | 28.2 | 11.8 | 19.9 | 172.5 |

### 2.2.3 Frosts

Since 1908, severe frosts have been recorded at Horsham as early as April 14 and as late as October 16. Light frosts have been recorded from March 7 to December 9. The average frost free period at Horsham is 207 days.

### 2.3 Vegetation

The native vegetation of the area has been greatly changed owing to clearing for agriculture and only remnants of the original timber remain. There is no apparent relationship between these remnants and soil distribution in the area surveyed. Buloke (Casuarina leuhammii) is the principal tree species in the area. Grey box (Eucalyptus hemiphloia) has a more limited distribution.
