

RECONNAISSANCE SURVEY OF THE MIDDLE REACHES OF THE GOULBURN RIVER CATCHMENT

Editor L. A. White

June 1990

**National Soil Conservation Programme
Department of Primary Industries
and Energy, Canberra**

**Land Protection Division
Dept. Conservation and Environment, Victoria**

TABLE OF CONTENTS

FOREWORD.....	2
ACKNOWLEDGMENTS.....	3
LIST OF CONTRIBUTORS.....	3
SECTION A: INTRODUCTION.....	10
1. Background.....	10
The study area.....	10
Project aims.....	10
Report presentation.....	12
2. History.....	13
Further Reading.....	17
SECTION B: THE LANDSCAPE.....	19
3. Climate.....	19
General climatic influences and weather patterns.....	19
Rainfall.....	19
Rainfall intensity.....	19
Rainfall variability.....	20
Raindays.....	20
Temperatures.....	20
Wind.....	20
Humidity.....	20
Evaporation.....	20
Cloud cover.....	20
Sunshine duration.....	20
Radiation.....	21
Phenomena.....	21
Further Reading.....	21
4. Water Resources And Utilisation.....	26
Water resources.....	26
Surface Water.....	26
Shire of Alexandra.....	26
Shire of Yea.....	26
Shires of Seymour and Broadford.....	27
Hydrology Statistics.....	28
Surface Water Quality.....	28
Groundwater.....	33
Water utilisation.....	33
Stream Diversions.....	33
Groundwater.....	34
Urban Water Supplies.....	34
Catchment management.....	34
River Management Boards.....	34
Flood Plain Management.....	37
Proclaimed Water Supply Catchments.....	38
5. Native Vegetation.....	40
Background.....	40
Present Vegetation Distribution.....	41
Vegetation Descriptions.....	42
Classification.....	42
Subalpine Complex.....	43
Open Forest IV.....	45
Open Forest III.....	46
Open Forest II.....	47
Open Forest I.....	47
Woodlands.....	47
Significant vegetation.....	48
Dieback of native Vegetation.....	49
6. Soil Conservation.....	50
Land degradation.....	50
Pre Settlement.....	50
Settlement.....	50
Recent Land Use.....	51

Soil Conservation Problems	52
Water Erosion – Pastoral (Figure 6.1)	52
Water Erosion – Non Agricultural (Figure 6.1).....	53
Water erosion – Alpine (Figure 6.1).....	54
Water Supply Catchment Protection (Figure 6.1).....	54
Dryland Salinity.....	56
Methods of Erosion Control	56
Farm Plans	56
Pasture Improvement.....	56
Treeplanting.....	56
Earthworks.....	56
Structures.....	57
Fencing	57
The Future	57
Land Protection	57
Salinisation	57
Pasture Development.....	57
Other Soil Studies.....	57
7. Geology and Geomorphology.....	58
Geology	58
Stratigraphy and structure.....	59
Cambrian	60
Silurian-Devonian.....	60
Middle – Upper Devonian	60
Upper Devonian – Lower Carboniferous.....	62
Cainozoic.....	62
Geomorphology.....	63
Prominent summits (Figure 7.5).....	65
Dissected highlands (Figure 7.5)	65
High plain	66
Plateaux (Figures 7.6, 7.7 and 7.8).....	66
Escarpments (Figure 7.9).....	68
Dissected hills (Figure 7.10).....	69
Isolated ridge (Figure 7.7).....	69
Eruption point.....	69
Undulating plain with low hills	69
Undulating plain	69
Flat Plain.....	69
Floodplain (Figure 7.6).....	70
Riverine plain	70
SECTION C: LAND USE.....	71
8. Agriculture.....	71
Determination of land use by physical features.....	71
Soil fertility.....	72
Pasture species and establishment	72
Number of size and holdings	73
Future of agriculture in the study area	74
9. Forestry.....	75
History of Forest Production	75
Hardwood Forests.....	75
Softwood Forests	76
Forest types and timber products	76
Current Production in the Study Area	77
Sawn Timber	77
Pulpwood.....	77
Minor Forest Products	77
Future Timber Supply.....	78
10. Mining.....	80
Yea-Molesworth area	81
Alexandra area.....	81
Walhalla-Woods Points Sub-Province.....	82
11. Residential Development.....	83

Census information.....	83
Planning.....	83
Contents of a scheme.....	83
Urban areas.....	83
Rural residential areas.....	84
Site analysis for rural residential development.....	84
Agricultural/farming areas.....	85
Hobby farming/rural living.....	86
Conservation/high quality habitat.....	86
12. Conservation And Recreation.....	87
Parks and Forest Reserves.....	87
Conservation on Public Land.....	90
Conservation on private land.....	92
SECTION D: LAND INVENTORY AND ASSESSMENT.....	94
13. Land Units And Soils Descriptions.....	94
Introduction.....	94
Method.....	94
Soil Geological Association.....	95
Land Unit Descriptions.....	95
Land Unit Maps.....	95
Soil Geology Association.....	96
Association 1.....	96
Soils Associated with Cambrian Rocks.....	96
Association 2.....	100
Soils Associated with Silurian and Devonian Sediments.....	100
Association 3.....	104
Soils Associated with Devonian Extrusives.....	104
Association 4.....	106
Soils Associated with Devonian Granite Rocks.....	106
Association 5.....	110
Soils Associated with Carboniferous Sediments.....	110
Association 6.....	112
Soils Associated with Tertiary Sediments.....	112
Association 7.....	114
Soils Associated with Quaternary Basalt.....	114
Association 8.....	116
Soils Associated with Older Alluvial Sediments.....	116
Association 9.....	118
Soils Associated with Recent Alluvium.....	118
Land Unit Descriptions.....	120
Land Units associated with plateaux.....	120
Land units associated with escarpments.....	122
Land Units associated with mountainous terrain.....	126
Land units associated with hilly terrain.....	131
Land units associated with low hills.....	136
Land units associated with rises and gentle slopes.....	138
Land units associated with plains.....	145
Land units associated with drainage courses and flood plains.....	149
Land Unit Maps.....	151
Landzones and Associated Units Key.....	152
Soil Geology Association Key.....	153
Land Unit Maps – Map 1.....	155
Landzones and Associated Units Key.....	156
Soil Geology Association Key.....	157
Land Unit Maps – Map 2.....	159
Landzones And Associated Units Key.....	160
Land Unit Maps – Map 3.....	163
Landzones And Associated Units Key.....	164
Soil Geology Association Key.....	165
Land Unit Maps – Map 4.....	167
Landzones And Associated Units Key.....	168
Soil Geology Association Key.....	169

Land Unit Maps – Map 5.....	171
Landzones And Associated Units Key	172
Soil Geology Association Key.....	173
Land Unit Maps – Map 6.....	175
Landzones And Associated Units Key	176
Soil Geology Association Key.....	177
Land Unit Maps – Map 7.....	182
Landzones and Associated Units Key	183
Soil Geology Association Key	184
Land Unit Maps – Map 8.....	186
Landzones And Associated Units Key	187
Soil Geology Association Key.....	188
Land Unit Maps – Map 9.....	190
Landzones And Associated Units Key	191
Land Unit Maps - 10.....	194
Landzones And Associated Units Key	195
Soil Geology Association Key.....	196
14. Land Evaluation And Survey Interpretation.....	199
SECTION E: ASSOCIATED INFORMATION	204
Appendix A	204
Tables and data associated with Chapter 3 Climate.....	204
Appendix B - A Listing of Major Plant Species Associatedw with Chapter 5 – Native Vegetation.....	219
Floristic Listing	219
A. A listing by stratum	219
B. A listing via common name in alphabetical order.....	221
Appendix C - Maps and Photography used in Chapter 13 – Land Units and Soil Descriptions.....	222
PHOTOGRAPHY	222
Appendix D - Land Capability Tables used for assessment in Chapter 14 – Land Evaluation and Survey Interpretation.....	223
Notes.....	230
Glossary.....	230

LIST OF FIGURES

Figure 1.1 – Map showing the mid Goulburn catchment study area, together with other associated NSCP – 10 Land Inventory studies (see insert).....	11
Figure 2.1 Prior and existing railway networks in and around the study area	15
Figure 3.1 Rainfall isohyets for the median, 50 percentile of annual rainfall for the study area.	21
Figure 3.2 Rainfall isohyets for the 10 percentile annual rainfall for the study area.	22
Figure 3.3 Rainfall isohyets for the 90 percentile of annual rainfall for the study area.....	22
Figure 3.4 Monthly distribution of rain days for selected stations.	23
Figure 3.5 Distribution of mean monthly maximum and minimum temperature and diurnal temperature range for selected stations.....	23
Figure 3.6 Distribution of mean monthly 9am and 3pm relative humidity for selected stations.	24
Figure 3.7 Monthly distribution of measured evaporation for selected stations.....	24
Figure 3.8 Distribution of mean monthly 9am and 3pm cloud cover for selected stations.....	25
Figure 3.9 Bar charts of the monthly distribution of mean daily sunshine hours for selected stations.	25
Figure 4.1 Drainage divisions and basins of Victoria.....	27
Figure 4.2 Current (active) gauging stations within the study area	30
Figure 4.3 River Management Boards within the study area.....	36
Figure 5.1 Vegetation Map depicting vegetation forms on crown land. (Small blocks of public land and river frontages are not shown).	44
Figure 7.1 Major structural lineaments (ridges and deep straight valleys) plotted from LANDSAT image.....	59
Figure 7.3 Geomorphological divisions of Alexandra Region. Original compilation at 1:100,000.	64
Figure 7.4 Location of cross-section diagrams on Figure 7.5 to 7.10.....	65
Figure 7.5 Section A - A'. Dissected highlands developed on the Cerberean Volcanics, and the strike ridge and alluvial fans of the Cathedral Range	67
Figure 7.6 Section B - B'. Dissected plateau on the Strathbogie Granite near Tallarook.....	67

Figure 7.7 Section C - C'. Strongly undulating plateau and isolated ridges of contact metamorphism of the Cobaw batholith.	67
Figure 7.8 Section D - D'. Undulating plateau averaging 700 metres elevation on the Mount Disappointment Granite and the Kinglake Plateau, averaging 500 metres elevation on Devonian sedimentary rocks.	68
Figure 7.9 Section E - E'. Undulating plateau and escarpment forming the Black Range at the eastern margin of the Strathbogie Granite.	68
Figure 7.10 Section F - F'. Dissected hills near Yea. Note the accordant summits (shown by broken line) of the high hills at 500 metres, and of the low hills at 300 metres.	68
Figure 8.1 Land Use in the middle reaches of the Goulburn River catchment.	73
Figure 9.1 The principle forested areas incorporating public and private land.	79
Figure 10.1 The principle finds of minerals within the study area.	80
Figure 12.1 A map depicting the principle recreation and conservation areas within the study region cross-referenced to other associated land use.	88
Figure 13.1 A summarised map of the study area highlighting principle Land Zones.	154

LIST OF PLATES

Plate 2.1 Horse team transporting machinery for gold mining. Woods Points Road. (Late 19 th century) Mansfield Historical Society.	13
Plate 2.2 Tallarook – Mansfield Line.	14
Plate 2.3 The Clark and Kidd forestry based sawmill at Rubicon, early 20's. Mansfield Historical Society.	15
Plate 2.5 Field hospital Kitchener Camp, 1910, Seymour Historic Society Collection.	16
Plate 2.6 On-site mill for cutting firewood near Seymour (circa 1903). Seymour Historical Society.	17
Plate 2.7 Group of skiers, Mount Buller, 1941. Mansfield Historical Society.	17
Plate 5.1 The southern forests still contain significant example of native vegetation in a moderately undisturbed form.	41
Plate 5.2 An example of Snow Gum woodland at Lake Mountain.	43
Plate 5.3 Sub-alpine complex at the head of Storm Creek. This is an example of an alpine bog, the dominant vegetation being candle heath (<i>Richea continentis</i>), alpine phebalium (<i>Phebalium phycifolium</i>), and sphagnum moss.	45
Plate 5.4 Within the study area, extensive areas of Mountain Ash forest are found around Marysville, Toolong and Mount Disappointment.	46
Plate 5.5 The remnants of native forest on land that has been cleared of trees for agriculture, only scattered trees remain.	49
Plate 5.6 The annual cut of hardwood sawlogs from public land in the study area is about 123,000 cubic metres. This represents about 12% of the states output.	49
Plate 6.1 Typical hill country scene within the study area. Note the almost total removal of trees and the rill and gully erosion that has occurred.	50
Plate 6.2 Increased fertility has caused the spread and dominance of capeweed. When capeweed dies off in late spring the hills are left bare.	51
Plate 6.3 Tonnes of organic matter, silt and gravel stripped from the hillside have flattened this fence and blocked a road culvert to the left of the photograph.	51
Plate 6.4 A heavy thunderstorm on an overgrazed hillside resulted in severe sheet erosion in the vicinity of Boonie Doon.	52
Plate 6.5 Severe gully erosion affects many drainage lines throughout the study area.	53
Plate 6.6, 6.7 Deep gullies often develop in drainage lines on overgrazed hillsides. However with reduced grazing, a series of diversion banks and treeplanting this gully has been stabilised.	53
Plate 6.8 The sowing of deep rooted perennial pastures is an important means of controlling and preventing erosion. Traditionally a chisel seeder like the one above has been used but many other methods including aircraft are also successful.	53
Plate 6.9 Improved grazing management is the key to preventing soil erosion. The photo illustrates how excessive stocking rates can severely reduce ground cover and predispose the hill country to sheet erosion.	54
Plate 6.10 Eildon Reservoir in the east of the study area is one of Victoria's major water storages and the prevention of soil erosion in its catchment is vital for its long term usefulness.	56
Plate 6.11 Rising saline water tables have caused severe land degradation in drainage lines in the west of the study area.	56
Plate 7.1 Boulder-strewn surface of the Cobaw Granite near Tooborac.	58
Plate 7.2 Joint-controlled stream channel (tributary of Stewart Creek) on the Strathbogie Granite.	59

Plate 7.3 Ridge and valley systems determined by strike of Silurian-Devonian sediments south of Yea.....	62
Plate 7.4 Escarpment and broad alluvial fans of the Cathedral Range.....	62
Plate 7.5 Small terraced floodplain of Johnson Creek near Alexandra.....	63
Plate 7.6 Catchments defined by narrow crested ridges and spurs – Johnson Creek and U.T. Creek near Alexandra.....	65
Plate 7.7 The undulating surface of the Kinglake Plateau, with escarpments to the south (left of photo) and north. In the background is the higher Mount Disappointment Plateau.....	66
Plate 7.8 Minor spurs on the flanks of the Yea Spur, Road-cut in foreground exposes Siluro-Devonian sediments.....	69
Plate 7.9 Abandoned channels of the Goulburn River on its floodplain south of Alexandra.....	70
Plate 7.10 Partially infilled abandoned meander of the Goulburn River at Homewood.....	70
Plate 9.1 Potential regrowth of Alpine Ash following the 1939 fires.....	76
Plate 9.2 Transport of harvest logs from the Rubicon State Forest, Alexandra.....	78
Plate 9.3 Harvesting of Radiata Pine from a small soft wood plantation.....	79
Plate 12.1 Forests of the study area contain numerous attractions, many of which are now found within parks and reserves.....	89
Plate 12.2 A view of the Goulburn River immediately below the Lake Eildon Reservoir. The river is a recreation resource that is extensively used for canoeing and fishing.....	89

LIST OF TABLES

Table 4.1 Hydrology Statistics for Current Stream Gauging Stations.....	29
Table 4.2 Water Salinity and its Effect on Application.....	30
Table 4.3 Maximum and Minimum stream salinity readings.....	32
Table 4.4 Source and Treatment of Urban Water Supplies for Towns within the Alexandra Region.....	35
Table 5.1 Structural forms of vegetation in the study area.....	42
Table 5.2 Vegetation Classification.....	48
Table 8.1 Value of production from the agricultural industries of the study area.....	71
Table 8.2 Number of holdings in various size ranges.....	73
Table 9.1 1985/1986 Sawlog allocation for hardwood and softwood forests.....	78
Table 12.2 Fraser National Park visitor statistics 1962/63 to 1984/85.....	90
Table 14.2 Land Capability Assessment ratings for each Land Unit within their terrain pattern.....	201
Table A.1 Highest daily rainfall intensities for selected stations.....	206
Table A.2 Estimated short duration intensities for specified return periods of several pluviograph stations.....	207
Table A.3 Windspeed versus direction frequency analyses for 9am and 3pm in the months of January and July.....	209
Table A.4 Monthly distribution of mean daily radiation for selected stations.....	217
Table A.5 Phenomena occurring at selected stations (days per month).....	218
