

## **ACKNOWLEDGEMENTS**

The format of this report is broadly based on that suggested by Rowe (1979). Parts of Section 2 and the format of Section 4 are based on Jeffery, Costello and King (1979).

Section 5 was prepared by Mr. J. Dickie, Land Disturbance Officer for the Soil Conservation Authority. He outlines the principles for reducing soil loss during construction and thus, siltation and water quality problems.

Foreword and Appendices II and III have been based on Rowe (1979) while the Glossary was compiled from various sources, including Whitten and Brooke (1972), Northcote (1974) and Soil Conservation Society (1970).

The Land Capability Assessment Section, the Draughting Office and the Publicity and Information Section of the Soil Conservation Authority have provided considerable assistance at various stages of the study and during preparation of the report.
