TECHNICAL BULLETIN No. 22  
MELBOURNE, 1971

## **ACKNOWLEDGMENT**

The soil survey described in this bulletin was made by the Department of Agriculture. The State Rivers and Water Supply Commission assisted by providing vehicles, field assistants, aerial photographs, plans and district office facilities. The Commission also contributed half of the publication costs.

The whole of the cartography for the soil maps was carried out by the Department of Crown Lands and Survey, as was the preparation of the plates for colour printing.

Numerous people in the three organizations have contributed much to the soil survey.

Special mention is made of the many officers of the State Rivers and Water Supply Commission; Mr. A. L. Tisdall, Chairman of the Commission and formerly Chief Irrigation Officer, for organizing the assistance provided, and the officers at the Kerang, Pyramid and Boort, district offices for, either directly or indirectly, providing assistance with the soil auger, maintaining the survey vehicle, and providing office facilities and local information.

Officers of the Regional Mapping Section of the Department of Crown Lands and Survey who warrant special mention are Mr. R. G. Lawrence and Mr. B. M. Crowley who supervised the preparation of the soil maps and Mr. L. H. Wealands who did most of the cartography.

Among present and past colleagues in the Department of Agriculture who have assisted, first mention must be made of the soil surveyors who carried out the field work. These officers are listed at the beginning of the report. Others who have helped materially are the chemists and laboratory assistants responsible for the soil analyses.

Last, but not least, mention must be made of the landholders who, without exception, freely allowed the soil surveyors access to their properties.

To all of these people the author extends sincere thanks.

## *Soil and Land Use in the Mid-Loddon Valley, Victoria*

*Including the Boort, Calivil, Dingee and Tragowel Plains Irrigation Areas, East Loddon Waterworks Area and Part of the West Loddon Waterworks District*

By J. K. M. Skene\*

Soils surveyed by J. D. Anderson, V. O. Grasmanis, R. Miller, H. H. M. Sarolea, J. K. M. Skene, J. K. Snow, N. Veinbrants and H. H. Winnall.

This report, "Soils and Land Use in the Mid-Loddon Valley, Victoria" concerns the detailed soil survey of about 620,500 acres of farm land and forest reserve in the Counties of Bendigo, Gladstone, Gunbower and Tatchera. About 359,000 acres is in the constituted Irrigation Areas of Boort, Calivil, Dingee and Tragowel Plains, and of this area approximately 171,700 acres is irrigated. Rather more than half of the irrigated land is under annual pastures, while about one-sixth is under perennial pastures. Other crops irrigated are lucerne, summer fodder crops and cereals. A considerable area of fallow is irrigated prior to sowing cereals. The agricultural pursuits on the irrigated land are fat lamb raising, sheep for wool production and dairying.

Approximately 231,000 acres of the surveyed area comprises land in the East Loddon Water works Area and West Loddon Waterworks District and, in the east of the area, land mainly between Mount Hope Creek and the present limits of the water-supply system. Apart from a little irrigation in the vicinity of the Waranga Western Channel, and forest reserves in the Terricks and Leaghur localities, all of this area is under dry-land farming.

Dry-farming pursuits throughout the whole area are wheat-farming, particularly to the west of the Loddon River, and the grazing of sheep for wool production on native and volunteer pastures.

Further descriptive information about the region is given in the section, " General Information about the Area " .
