

**A STUDY OF SOILS IN THE
REEFTON EXPERIMENTAL AREA;
WITH PARTICULAR REFERENCE TO
HYDROLOGICAL PROPERTIES**

DAVID B. REES

Laboratory measurements	19
Field Measurements	19
SOIL TYPES AND DESCRIPTIONS	21
General soil type descriptions	21
Detailed soil type descriptions	21
1. Red gradational ('wet') soils	21
2. Brown Gradational and Forest Brown ('Wet' transitional) soils	26
3. Skeletal, stony ('Dry', Lithosol) soils	27
4. Yellow Brown/Brown Gradational ('Dry' transitional) soils	28
5. Organic soil	31
6. Gley Soils	32
Distribution of soil types	32
SOIL PHYSICAL PERAMETERS	34
Soil depth	34
Bulk density and porosity	34
Soil water retention	35
Available water capacity (AWC)	42
INFILTRATION AND HYDRAULIC CONDUCTIVITY	44
Infiltration and sorptivity	44
Methodology	44
Field measurements	44
Results	44
Results	49
ERODIBILITY AND CHEMICAL ANALYSES	54
Texture	54
Cation exchange capacity (CEC)	54
Erodibility indices	55

List of Maps

Map 5 – Reefton: Soil Samples: Disturbed and Undisturbed (Core samples).....	36
Map 6 – Infiltration and Hydraulic Conductivity Sample Sites.....	45

List of Tables

Table 1: Precipitation distribution.....	6
Table 2: Catchment Characteristics.....	8
Table 3 Vegetation*: vegetation type for each catchment (hectares) and proportion of catchment per vegetation type.....	17
Table 4: Soil type characteristics summary.....	25
Table 5. Proportions of soil type per catchment. (%).....	32
Table 6: Bulk Density for each soil type. (g/cm ³).....	34
Table 7: porosity for each soil type.....	34
Table 8: Water Retention for each soil type.....	42
Table 9: Infiltration; Geometric mean for each soil type.....	46
Table 10: Sorptivity; Geometric mean for each soil type.....	46
Table 11: Hydraulic conductivity; Geometric mean for each soil type.....	46
Table 12 Hydraulic conductivity classes (metres/second (10 ⁻⁵)): Proportions per class (%).....	49
Table 13: Cation Exchange Capacity for each soil type (m.e. %).....	54
Table 14: organic matter (Organic Carbon (W&B x 2.24) %.....	54
Table 15: Erodibility factor K (USKE).....	55
Table 16: electrical Conductivity (µS/cm).....	56

List of Plates

Plate 1 – Geology: Vertically dipping Montys Hut Formation: sandstone, siltstone and claystone	10
Plate 2 – Reefton – View of catchments, looking from catchment 1 to catchment 6	11
Plate 3 – Site 31: Upper drainage line profile.....	30
Plate 4 – Site 31: Sample peds for each horizon.....	30

Appendices

Appendix 1	58
Appendix 2: Bulk Density and Water Retentivity data.	59
Appendix 3 (i) Infiltration (mm/s) and Sorptivity (mm ^{1/2})	60
Appendix 4 Erodibility (i) Texture, Organic matter (%) Free Fe ₂ O ₃	62
Appendix 4 (ii) Electrical conductivity, Cation Exchange Capacity, Proportion of Hydrogen ions, Erodibility (K; USLE) and Emerson classes.	63

ACKNOWLEDGMENTS

I wish to thank a number of people for their assistance and advice during the term of this project. Initial assistance from Dr A. Wu and Dr M. Papworth from the SCA Hydrology Section and Mr D. Howe of the Land Capability Section and Mr R. Joy were most helpful.

Field assistance from Mr C. McGregor was invaluable in the difficult terrain. Mr D. Howe and Dr R. Van de Graff were helpful in the field and with Mr. S. Ransome contributed comments on the report.

Analysis of field samples were carried out by the laboratory staff of the SCA. A large number of samples and tests were carried out promptly by Mr I. Leslie, Mr D. Cummings, Mr L. Heaney and Mr K. Bode which was greatly appreciated, especially given the limited time period of the projects.

Drafting by Mr G. Dunnet, Miss A. Beeston and Miss L. Matthews was also appreciated.

I would also like to acknowledge the help of Mr. P. O'Shaughnessy from the MMBW's forestry Research Section in Melbourne and in Warburton and for the loan of a 2-way radio for use in the survey. Also the co-operation of Mr V. Henderson of the forestry Commission drafting section is acknowledged.

Finally, the co-operation of the Ministry for Conservation Word Processing unit is greatly appreciated.
