

# **A STUDY OF THE LANDSLIDES AND THEIR RELATION TO ENGINEERING AND PLANNING IN THE SOUTHERN DISTRICTS OF THE NARRACAN SHIRE, VICTORIA**

By J. C. Brumley

*Title page: Oblique aerial view of numerous landslides along the valley of Watkins Creek*

## **ABSTRACT**

Landslides of the slump-earth flow type are common in areas of strongly undulating terrain in the Strzelecki Ranges south of Trafalgar. Failures occur each winter following heavy rain which triggers movement in the clay rich residual soil slopes.

The Shire of Narracan has a major problem in maintaining roads which are damaged each year by landslides, and some landowners are troubled by landslide damage to their pasture, fences and dams. The current trend towards subdividing farm land into small hobby farms also poses serious problems when subdivision is planned in landslide-prone areas.

This study examines the nature and distribution of landslides, the properties of the soils involved and the factors responsible for slope instability. Detailed studies have been made of the clay mineralogy, soil lithology and classification properties, and the history of land use in the area. Suggestions are made for mitigating the existing and potential landslide hazards.

# CONTENTS

1	INTRODUCTION	1
	1.1 Background to the Study	1
	1.2 Aims of the Study	2
	1.3 Investigation Methods	2
2	THE NATURE OF THE LAND	4
	2.1 History of Settlement and Land Use	4
	2.2 Geology and Geomorphology	5
	2.2.1 General Geology	5
	2.2.2 Lower Cretaceous Strzelecki Group (Kls)	5
	2.2.3 Childers Formation (Tec)	6
	2.2.4 Tertiary Older Volcanics (Tvo)	6
	2.2.5 Geomorphology	7
	2.3 Rainfall	7
	2.4 Seismicity	11
3	LANDSLIDE TYPES AND OCCURRENCE	12
	3.1 Classification of Landslides	12
	3.2 Recognition of Landslides	12
	3.3 Landslides in the Study Area	14
	3.3.1 Landslide Distribution	14
	3.3.2 Roadside Landslides	14
	3.3.3 Landslide Types	15
	3.3.4 The Age of Landslides	18
4	FIELD STUDIES	20
	4.1 Initial Reconnaissance	20
	4.2 Site Investigation of Selected Landslides	20
	4.2.1 Drilling and Sampling Techniques	20
	4.2.2 Field Logging	20
	4.2.3 Observations at Selected Landslides	21
5	SOIL ANALYSIS, DESCRIPTION AND CLASSIFICATION	29
	5.1 Laboratory and Field Soil Classifications	29
	5.1.1 Laboratory Classification Tests	29
	5.1.2 Correlation between Field and Laboratory Soil Classifications	29
	5.2 Soil Descriptions for each Geological Formation	34
	5.2.1 Tertiary Older Volcanics	34
	5.2.2 Childers Formation	35
	5.2.3 Lower Cretaceous, Strzelecki Group	37
	5.3 Clay Mineralogy and Groundwater Chemistry	40
6	CAUSES AND REMEDIAL MEASURES	44
	6.1 Causes of Slope Movement	44
	6.2 Remedial Measures	45
	6.2.1 Approach Methods	45
	6.2.2 Landslide Susceptibility and Hazard Evaluation in Relation to Landslide Avoidance	45
	6.2.3 Removal of Landslide Material	46
	6.2.4 Reduction of Activating Forces	46
	6.2.5 Increase of Resisting Forces	47
	6.2.6 Current Shire Practice	48
7	CONCLUSIONS AND RECOMMENDATIONS	49
	7.1 Conclusions	49
	7.2 Recommendations	49
	ACKNOWLEDGEMENTS	51
	REFERENCES	52
