Contents

Acknowledgments	iv
Executive Summary	vi
1. Introduction	1
1.1 The extent and effect of salinity in West Gippsland	1
1.2 What are groundwater flow systems and why are they important for management of dryland and irrigation salinity?	5
1.3 The plan to address dryland salinity	6
1.4 Project scope	7
1.5 Methodology	8
2. Method	9
2.1 Key data sets to compile GFS maps	9
2.2 Key additional data sets used to determine GFS characteristics	16
3. Management options	18
3.1 Recharge reduction	18
3.1.1 Pasture options	18
3.1.2 Tree planting options for recharge control	20
3.1.3 Surface drainage	21
3.1.4 Improved irrigation management	21
3.2 Groundwater discharge enhancement	22
3.2.1 Sub-surface drainage (especially groundwater pumping)	23
3.2.2 Tree planting options to intercept groundwater	25
3.3 Living with salt	26
4. Groundwater Flow Systems	27
4.1 The GFS map	27
4.2 Characteristics of the GFSs	32
5. Summary of salinity management options in the context of groundwater flow systems	89
5.1 Tree planting for recharge control	89
5.2 Perennial pasture establishment	92
5.3 Engineering options	92
5.4 Living with salt	93
6. The next steps	94

6.1	Quantifying the benefits of salinity management options	94
6.2	Land capability assessment and analysis of environmental, social and economic costs and benefits of management options	94
6.3	Capacity building	95
6.4	Develop innovative and cost effective methods of program delivery	95
6.5	Knowledge gaps	95
7.	References	97
	Appendix A Maps used to characterise the GFS	100

Document history and status

Revision	Date issued	Reviewed by	Approved by	Date approved	Revision type
Draft A	15/2/2005	R. Evans, D. Heislars (EWR)	R. Evans	15/2/2005	Comments addressed and report amended
Draft B	28/4/2005	R. Evans, D. Heislars (EWR)	R. Evans	28/4/2005	Comments addressed and report amended
Final 1	6/6/2005	Steering Committee	R. Evans	6/6/2005	Comments addressed and report amended
