

## ACKNOWLEDGMENT

The soil survey described in this bulletin was made by the Department of Agriculture, many of whose officers contributed greatly to the work.

The State Rivers and Water Supply Commission provided feature survey plans and some contour plans, a vehicle, and field assistants, and contributed half the cost of this publication. Mr. W. P. Dank, Chief Irrigation Officer, is thanked for his help in all these and other ways.

The Department of Crown Lands and Survey prepared the photomosaics, did all the cartography and prepared the plates for colour printing. Mr. R. G. Lawrence supervised the cartography and developed the method for colour printing the photomaps. Mr. L. H. Wealands did the draughting and Mr. F. L. Furze made the photomosaics for the detailed maps.

Among past and present colleagues in the Department of Agriculture, first mention must be made of Mr. J. C. Nieuwenhuis, Field Officer, who shared the very intensive field work with the author. Mr. P. O. Macumber, Soils Officer and Mr. H. R. Thorne, Field Officer also contributed towards the end of the survey.

Thanks are also due to Mr. J. K. M. Skene, formerly Senior Soils Officer who initiated the survey, and more recently to Mr. W. I. Walbran, Senior Soils Officer who has guided the compilation of the report. Others who have helped materially are the chemists and laboratory assistants responsible for the analyses.

Mr. F. L. French, Senior Tobacco Agronomist and Mr. R. Worden, District Tobacco Instructor, are specially thanked for their freely imparted knowledge of tobacco growing and of district soils. Mr. Worden's excellent relationship with the tobacco growers, and the help given by Mr. G. Harvey and Mr. M. Niovanni of the Victorian Tobacco Growers Association, and by Mr. W. J. McGuffie of the Ovens and Murray Tobacco Producers, greatly facilitated the field work.

Finally the author wishes to thank the many landholders and share farmers who helped in so many ways.
