

4. DETAILED MAP UNIT DESCRIPTIONS AND CAPABILITY RATINGS

Twenty-seven map units have been identified within the Shire of Broadford. Each map unit is described in a 2-page format in terms of the geology, topography, dominant soil and general site characteristics, and includes a table of capability ratings for those land uses considered important by the Shire of Broadford, and estimates of susceptibility to erosion and recharge. The rating table also identifies the major limiting feature(s) for each land use.
